PROJECTS

- **AI-Powered Healthcare Insights**

Designed a machine learning pipeline to predict diabetes, hypertension, and stroke likelihood using structured health data. This project aids healthcare professionals by offering actionable health predictions. Implemented models like Random Forest, XGBoost, and Logistic Regression with Python. 

- **P2P File-Sharing System**

Created a Peer-to-Peer file-sharing application designed for secure and efficient data transfer. The Tkinter-based GUI simplifies file selection, incorporates password-protected transfers, and tracks real-time progress. Features include pausing, resuming, and monitoring transfer speeds, ensuring seamless user experience and reliable data handling. 

- **Agri-Horticultural Price Prediction**

Developed a predictive model to estimate the prices of agricultural commodities, such as pulses and vegetables. This tool supports farmers in making informed decisions about crop sales. The project utilized Python libraries including XGBoost, Random Forest, and LightGBM to ensure high accuracy and scalability. 

- **Medical Records Analyzer**

Built a webpage integrated with an AI/ML model to analyze patient histories and predict the likelihood of current ailments being linked to past diseases. The model leverages Python for data analysis and symptom recurrence detection, enabling healthcare providers to improve treatment plans. 

- **To-Do List Application**

Designed a web application for task management that allows users to add, update, and delete tasks. Flask was used for the backend, with SQLite for data storage. The user-friendly interface, built using HTML, CSS, and JavaScript, ensures easy navigation and productivity. A live demo of the application is hosted online. 

- **Personal Portfolio Website and Calculator**

Developed a portfolio website to showcase projects and achievements, using HTML and CSS for design. Additionally, built a functional calculator with JavaScript to demonstrate technical skills. 

EXPERIENCE

- **CodSoft**

Completed a 4-week virtual internship in Web Development, gaining expertise in HTML, CSS, JavaScript, and PHP. *Intern*

- **DevFest**

Applied machine learning techniques to predict diseases based on symptoms and developed an interactive website showcasing the results. *Participant*

- **Glitch! The eSports Society**

Organized and facilitated competitive gaming events with participation from multiple teams, managing logistics and outreach. *Executive Committee Member*

- **SIH-Smart India Hackathon**

Developed an AI-ML-based model for predicting agri-horticultural commodity prices. Presented solutions to a real-world problem. *Participant*

SKILLS

Languages

Python, Java, PHP, C

Web Technologies

Flask, HTML, CSS, JavaScript

Databases

MySQL

Libraries

Numpy, Pandas, Matplot, Seaborn

EDUCATION

Manipal University Jaipur

B.Tech in Information Technology

CGPA: 8.71

Expected in 09/2026
